Supabase / SQL
Vercel
Git / GitHub
APIs & webhooks
Twilio messaging integrations
Authentication
Multi-tenant SaaS
AI-assisted development
Prompt engineering
Mobile-first / responsive UI
NFC / QR workflows
Debugging & QA
Edge-case testing & debugging
Real-device testing
Local / offline AI workflows

EDUCATION

Green River College
Associate Degree
International Business & Marketing
2015

LANGUAGES

English — Native / Fluent
Spanish — Native / Fluent

PORTFOLIO

Live products and private code samples available upon request.

PRODUCT & TECHNICAL EXPERIENCE

MenuTap 2026 - Present

Founder & Product Developer | FoodSpotMobile.com

- Built a multi-tenant, Supabase-backed restaurant SaaS with authentication, database-driven menu management, responsive admin/customer flows and NFC/QR publishing.
- Reduced initial menu setup from manual entry to an AI-assisted review workflow that converts existing restaurant menus into structured, editable digital menus.
- Built a tap-to-open guest experience combining menus, Wi-Fi, reviews and branding; own product architecture, debugging, QA and edge-case testing.

UGC Camera 2026 - Present

Founder & Product Developer | UGCCamera.com

- Built a multi-tenant NFC/QR browser-camera and UGC platform for local businesses and e-commerce, from concept through repeated real-device testing.
- Developed high-resolution capture, native-style 1:1 framing, pinch-to-zoom, drag/reposition interactions and touch-sensitive controls designed to feel closer to a native social camera than a generic web upload flow.
- Invested 200+ hours in camera UX, capture/share flows, multilingual journeys, responsive behavior, debugging and mobile edge cases.

FoodSpot Mobile Dec 2025 - Mar 2026

Founder & Product Developer | Multi-tenant food-commerce SaaS

- Built a full front- and back-end online-store platform for food businesses with customizable storefront/menu layouts, ordering workflows, inventory tracking and expense management.
- Integrated Mercado Pago payments, event creation, QR ticketing and vendor workflows, plus an AI advisor surfacing product performance and top-selling items.
- Embedded UGC Camera into the post-purchase journey to prompt customers to capture and share food photos.

Independent macOS App Suite 2025

AI-Assisted Product Developer | Personal productivity tools

- iVoice: built a local macOS speech-to-text app with Ollama-powered AI workflows and translation across 10 languages.
- iOrganize: built a macOS cleanup and organization utility for caches, screenshots and duplicate files/photos, with scheduled cleanup and organization workflows; still used regularly.
- iBrain: built a locally running AI assistant designed to work without Wi-Fi. Rapidly prototyped the suite from concept to functional apps in days using AI-assisted development.

The Auto Barber 2020 - 2025

Founder & Owner | Seattle-area automotive restyling

- Launched during the pandemic and grew the business to six-figure revenue and 165+ five-star Google reviews over five years.
- Led sales, marketing, operations, hiring and employee training while delivering premium automotive restyling services.

ADDITIONAL EXPERIENCE

Digital Impact 2024 - 2025 — Founded a web, social-media and promotional marketing business serving local companies; produced websites and campaign assets.

Spines (AI) 2025 — Sales representative for an AI-enabled publishing company; advised customers, answered product questions, demonstrated offerings and conducted outbound calls.

Remote Roofing / Solar Sales — Conducted outbound prospecting and booked appointments for free roofing estimates in a remote sales role.
