LinkedIn: Daiske Brandan

01 PRODUCTS I'VE BUILT

UGC CAMERA

2026 - Present

Founder & AI-Native Product Developer | Browser UGC SaaS

- Built a branded NFC/QR browser camera from concept through production: high-resolution capture, framing, zoom/reposition, filters, drawing, hundreds of draggable stickers, export and native social sharing.
- Own the business and guest experience, QR design system and analytics. Spent 200+ hours testing real mobile-browser behavior and debugging the capture -> edit -> composite/export -> share flow.

MENUTAP

2026 - Present

Founder & AI-Native Product Developer | Restaurant NFC guest-engagement SaaS

- Built a Supabase-backed restaurant table hub for digital menus, Wi-Fi access, Google reviews, social links and 15+ interactive guest games, with NFC/QR publishing and configurable restaurant settings.
- Designed the customer and admin experiences and independently own product decisions, UX, implementation direction, QA, debugging and deployment.

FOODSPOT MOBILE

Dec 2025 - Mar 2026

Founder & AI-Native Product Developer | Multi-tenant restaurant operations SaaS

- Built an end-to-end restaurant platform with isolated business accounts, customizable branding, multilingual menus and dine-in, takeout and delivery ordering. Included staff logins, table-side ordering, POS/KDS-style kitchen workflows, inventory, expenses, rewards and sales analytics.
- Integrated live Mercado Pago payments and webhooks, QR-ticketed events with weather data, AI recommendations based on actual sales, and a post-purchase UGC camera. Tested 3-4 isolated tenants and completed real production payment flows end to end.

INDEPENDENT MACOS APP SUITE

2026

AI-Native Product Developer | Native/local productivity tools

- Built iVoice, iOrganize and iBrain for speech-to-text and translation, file cleanup/organization and offline AI workflows; tested and debugged permissions, hotkeys, local models and native desktop behavior.

02 HOW I BUILD

THINK -> RESEARCH -> DIRECT -> BUILD -> TEST -> BREAK -> DEBUG -> SHIP

I plan products at the workflow level: what the customer does, what each action triggers, where data moves and what can fail. I research comparable products, direct Claude Code / Codex through implementation, then use the product like an inexperienced customer - clicking every path, capturing failures, debugging and repeating until it works.

PRODUCT + QA

Product architecture / UX decisions / exploratory testing / real-device QA / regression testing

SYSTEMS

Supabase / SQL / auth + RLS / APIs / webhooks / Mercado Pago / GitHub / Vercel / Heroku

AI WORKFLOW

Claude Code / Codex / ChatGPT / Gemini / Perplexity - implementation, research, debugging and review

03 EXPERIENCE + EDUCATION

THE AUTO BARBER Founder & Owner - Seattle

2020 - 2025

SIX-FIGURE REVENUE 165+ FIVE-STAR GOOGLE REVIEWS

Built and operated a premium automotive restyling business. Led sales, customer experience, marketing, operations, hiring and employee training - bringing ~5 years of business ownership and a broader customer-service background into my product work.

Digital Impact Spines (AI)

2024-2025 | Web, social-media and promotional marketing for local businesses.

2025 | AI-enabled publishing sales, product demos, customer advising and outbound calls.

Green River College

Associate Degree - International Business & Marketing - 2015
